

COLORADO FOREST AND WATER ALLIANCE

Colorado Success Story on Forest-Water Quality Leadership

POSITION: The Colorado Forest and Water Alliance (COFWA) applauds the numerous Colorado success stories of proactive, innovative, and collaborative approaches to tackling forest health and watershed protection in different forest types across our state, and encourages the continued support for this approach by federal, state and local agencies and organizations.

BACKGROUND: COFWA recognizes that all Coloradans benefit from healthy forests and protected water resources. If our forests remain unhealthy, they are susceptible to significant insect and disease infestation, and the ever-increasing risk of unnaturally large and severe wildfires, which result in devastating post-fire flooding, erosion, degradation of water quality, and damage to water infrastructure. The environmental, economic and social costs of poor forest health are borne by both rural and urban Coloradans, and the eighteen other states that rely on Colorado's headwaters for their water supply. Finally, these extreme fires cause air-quality impacts that result in negative health outcomes for many citizens, and increased health-care costs for all of us.

COFWA recognizes that decision making must be grounded in science-based, proactive, and collaborative approaches to land management across all land ownership boundaries in the state. Science-based understanding supports strategic active forest management to reduce risks of insects, disease, catastrophic wildfires and post-fire threats, while protecting the natural resource base that all life depends on. Science-based understanding also helps create broad support for forest-resiliency projects at an increased pace and scale than currently exists. Collaboration assures that projects meet the needs of the many, and respects the needs of citizens.

COFWA celebrates the myriad efforts across the state, which this short list exemplifies:

- Creation of over 70 forest and watershed collaboratives across the state, beginning as early as 1987;
- Implementation of the Collaborative Forest Landscape Restoration Program projects (CFLRP) on the Front Range and the Uncompahgre Plateau, which have implemented forest restoration projects on over XX acres since 2009;
- Creation of state and local tax and financing options, such as development of the state's Wildfire Risk Reduction Grant program, which has allocated over \$14 million dollars to a matching-grant program since 2013, or Summit County's Wildfire Prevention tax, a voter-approved property tax that provides \$1 million per year toward wildfire prevention initiatives;
- Implementation of the Forests to Faucets program of work, through which municipal water providers have invested millions of dollars per year in partnership with federal land managers to mitigate around critical water resource areas;
- Creation of Good Neighbor Authority—in which cross-boundary work can be completed on both private and federal lands. This program was piloted in Colorado in 2000, and expanded in the 2018 Farm Bill to cover the entire country;
- Implementation of Colorado's Water Plan, which included a strong focus on the nexus of water and forests, and emphasized watershed health as a critical strategy for protect the interests of Coloradans.

The members of the Colorado Forest & Water Alliance (COFWA) have joined together for mutual assistance in advocating at state and federal levels about policies, funding, and programs that support meaningful and measurable improvements in forest health and watershed resiliency benefiting Colorado.
